WHAT IS CLAIMED IS:

1. Polythiophenes of the formula

wherein R is a side chain; m is the number of substituents; A is a divalent linkage; x, y and z represent, respectively, the numbers of R substituted thienylene, unsubstituted thienylene, and divalent linkages A in the monomer segment with z being either 0 or 1; and n represents the number of the repeating monomer segments in the polymer chain or the degree of polymerization.

2. Polythiophenes in accordance with **claim 1** and which polythiophenes are represented by

$$\begin{array}{c|c} \hline \begin{pmatrix} S \\ \\ \end{pmatrix}_a & \begin{pmatrix} S \\ \\ \end{pmatrix}_b & \begin{pmatrix} S \\ \\ \end{pmatrix}_c & \begin{pmatrix} S \\ \\ \end{pmatrix}_d \\ \\ \end{matrix}_n$$

wherein R is a side chain; a is an integer of from about 0 to about 5; b, c, and d are integers of from about 1 to about 5; and n represents the degree of polymerization of from about 5 to about 5,000; the number average molecular weight (M_n) of the polythiophenes is from about 2,000 to about 100,000, and the weight average molecular weight (M_w) is from about 4,000 to about 500,000, each measured by gel permeation chromatography using polystyrene standards.

3. Polythiophenes in accordance with **claim 1** and of the formulas

(II-e)

- 5. Polythiophenes in accordance with claim 1 wherein m is1.
- 6. Polythiophenes in accordance with **claim 1** wherein R is alkoxyalkyl, siloxy substituted alkyl, a perhaloalkyl, or a polyether.
- 7. Polythiophenes in accordance with **claim 1** wherein A is an arylene.
- 8. Polythiophenes in accordance with **claim 7** wherein said arylene possesses from about 6 to about 40 carbon atoms.

- 9. Polythiophenes in accordance with **claim 7** wherein said arylene is phenylene.
- 10. Polythiophenes in accordance with **claim 7** wherein said arylene is biphenylene, phenylthrenylene, fluorenylene, polymethylene, dioxyarylene, or 9,10-dihydrophenanthrenylene.
- Polythiophenes in accordance with claim 1 wherein m is
 or 2.
- 12. Polythiophenes in accordance with **claim 1** wherein x, y, and z represent the number of segments of from 1 to about 5 for x and y, and z is zero (0) or 1.
- 13. Polythiophenes in accordance with **claim 1** wherein n is from about 5 to about 5,000; the number average molecular weight (M_n) of the polythiophene is from about 2,000 to about 100,000; the weight average molecular weight (M_w) is from about 4,000 to over 500,000, both M_w and M_n being measured by gel permeation chromatography using polystyrene standards.
- 14. Polythiophenes in accordance with **claim 1** wherein R is alkyl containing from 1 to about 20 carbon atoms; wherein n is from about 10 to about 1,000; the M_n is from about 4,000 to about 50,000; and the M_w is from about 5,000 to about 100,000.
- 15. Polythiophenes in accordance with **claim 1** wherein the alkyl side chain R contains from about 6 to about 12 carbon atoms.

- 16. Polythiophenes in accordance with **claim 1** wherein the alkyl side chain R is butyl, pentyl, hexyl, heptyl, octyl, nonyl, decyl, undecyl, or dodecyl.
- 17. Polythiophenes in accordance with **claim 1** wherein the side chain R is a perfluoroalkyl of about 2 to about 15 carbon atoms.
- 18. Polythiophenes in accordance with **claim 1** wherein the side chain R is siloxyalkyl of trimethylsiloxyalkyl or triethylsiloxyalkyl, and wherein alkyl optionally contains from about 4 to about 10 carbons, and which alkyl is butyl, pentyl, hexyl, heptyl, or octyl.
- 19. Polythiophenes in accordance with **claim 1** wherein the divalent linkage A is an arylene with from about 6 to about 40 carbon atoms.
- 20. Polythiophenes in accordance with **claim 19** wherein the divalent linkage A is selected from the group consisting of phenylene, biphenylene, phenanthrenylene, 9,10-dihydrophenanthrenylene, fluorenylene, methylene, polymethylene, dioxyalkylene, dioxyarylene, and an oligoethylene oxide.

21. Polythiophenes in accordance with **claim 1** and represented by

$$\begin{array}{c|c}
\hline
\begin{pmatrix} S \\ \\ a \end{pmatrix} \\
\hline
\begin{pmatrix} S \\ \\ b \end{pmatrix} \\
\hline
\begin{pmatrix} S \\ \\ c \end{pmatrix} \\
\hline
\begin{pmatrix} S \\ \\ d \end{pmatrix}_{n}$$
(II)

wherein R is a side chain; a, b, c, and d represent the number of thienylene moieties; and n is the degree of polymerization of from about 1,000.

- 22. Polythiophenes in accordance with **claim 21** wherein R is alkyl containing from about 1 to about 20 carbon atoms; or wherein R is alkyl containing from about 6 to about 12 carbon atoms.
- 23. Polythiophenes in accordance with **claim 21** wherein R is butyl, pentyl, hexyl, heptyl, octyl, nonyl, decyl, undecyl, or dodecyl.
- 24. Polythiophenes in accordance with **claim 21** wherein b and d are from about 1 to about 5.
- 25. Polythiophenes in accordance with **claim 21** wherein b and d are from about 1 to about 3.
- 26. Polythiophenes in accordance with **claim 21** wherein a is from about 0 to about 5, and c is about 1 to about 5, or wherein a is about 0 to about 3, and c is about 1 to about 3.

27. Polythiophenes in accordance with **claim 1** wherein said polythiophene is selected from the group consisting of polythiophenes (II-a) through (II-o), and wherein n is from about 100 to about 4,000

(II-g)

28. A process for the preparation of polythiophenes comprising reacting about 1 molar equivalent of a suitable monomer in an organic solvent with about 1 to about 5 molar equivalents of a ferric chloride at a temperature of from about 25°C to about 80°C, and which polythiophenes are of the formula

$$\begin{array}{c|c}
 & S \\
 & C \\$$

wherein a, b, c, and d represent the number of segments; each R is a side chain, and n represents the degree of polymerization or the number of repeating segments.

29. A process in accordance with **claim 28** which comprises reacting about 1 molar equivalent of monomer (IIIb) of the formula and which polythiophene is of the formula

$$\begin{array}{c|c}

with a 1.1 molar equivalent of Zn in anhydrous tetrahydrofuran, followed by treatment with a catalytic amount of [1,2-bis(diphenyl phosphinoethane)] dichloronickel (II) and subsequent reaction by heating at a temperature of about 30°C to about 80°C.

30. A process in accordance with **claim 28** wherein said R side chain is alkyl, substituted alkyl, or perhaloalkyl.

- 31. A process in accordance with **claim 28** wherein alkyl contains from 1 to about 25 carbon atoms or from 4 to about 15 carbon atoms; wherein substituted alkyl is alkoxy alkyl, or siloxy substituted alkyl; and said perfluoro is a polyether.
- 32. A process in accordance with **claim 28** wherein the relative positions of R_m substituted thienylene, unsubstituted thienylene, and A in the monomer segment are dissimilar than schematically presented in (I).
- 33. Polythiophenes in accordance with **claim 2** wherein arylene is phenylene, biphenylene, phenanthrenylene, 9,10-dihydrophenanthrenylene, fluorenylene, polymethylene, or dioxyalkylene, dioxyarylene.
